EDUCATION

University of Oxford

Ph.D. in Computer Science. *Focus: Embodied Agents, VLM/VLA for Robots, 3D Vision*

Oct 2023 – July 2027 (Expected)

University of Cambridge

MPhil in Advanced Computer Science

Oct 2022 – July 2023

Distinction

University of Michigan—Ann Arbor

B.S.E. in Computer Engineering, Minor in Mathematics

Sept 2019 – May 2022

Cumulative GPA: 3.97

SELECTED PUBLICATIONS

COOPERA: Continual Open-Ended Human-Robot Assistance. ICCV, 2025 in submission.

Chenyang Ma, Kai Lu, Ruta Desai*, Xavier Puig*, Andrew Markham*, Niki Trigoni* (*= Equal Advising)

SpatialPIN: Enhancing Spatial Reasoning Capabilities of Vision-Language Models through Prompting and Interacting 3D Priors. NeurIPS, 2024.

Chenyang Ma, Kai Lu, Ta-Ying Cheng, Niki Trigoni, Andrew Markham

Gradient-less Federated Gradient Boosting Tree with Learnable Learning Rates. EuroMLSys Workshop, 2023.

Chenyang Ma, Xinchu Qiu, Daniel Beutel, Nicholas Lane

Touch and Go: Learning from Human-Collected Vision and Touch. NeurIPS, 2022.

Fengyu Yang*, Chenyang Ma*, Jiacheng Zhang, Jing Zhu, Wenzhen Yuan, Andrew Owens (*= Equal Contribution)

Sparse and Complete Latent Organization for Geospatial Semantic Segmentation. CVPR, 2022.

Fengyu Yang*, Chenyang Ma* (*= Equal Contribution)

RESEARCH / INTERNSHIP EXPERIENCES

Research Collaborator at FAIR, Meta Inc.

June 2024 – Apr 2025

Mentors: Xavier Puig & Ruta Desai

Remote / SF Bay Area, US

- Proposed a new framework towards continual and open-ended human-robot collaboration
- Developed a method to simulate realistic humans within robot simulation software using LLMs and motion data
- Introduced a benchmark and an approach to personalize robot actions through multiple days of collaboration

PhD Student at CPS, University of Oxford

Oct 2023 – Present

Mentors: Andrew Markham & Niki Trigoni

Oxford, UK

- First Project: SpatialPIN — a modular plug-and-play framework that progressively enhances VLM's 3D reasoning capabilities by prompting and interacting with 3D foundational models
- Second Project: COOPERA — a framework for continual and open-ended human-robot collaboration
- Third Project (ongoing): CycleVLA — adaptive VLA that self-corrects failures in dynamic environments

Research Collaborator at FAIR, Meta Inc.

June 2024 – Apr 2025

Mentors: Xavier Puig & Ruta Desai

Remote / Oxford, UK

- Proposed a new framework towards continual and open-ended human-robot collaboration
- Developed a method to simulate realistic humans within robot simulation software using LLMs and motion data
- Introduced a benchmark and an approach to personalize robot actions through multiple days of collaboration

Applied Scientist Intern at Roku Inc.

July 2024 – Oct 2024

Mentor: Michael Sanders

Cambridge, UK

- Investigated the problem of IoT camera package delivery detection under adversarial condition
- Framed the problem within and addressed pain points in video-based human action recognition caused by the complexity of real-world data (e.g., high variety of camera angles, backgrounds, illumination, scales, etc.)

- Developed a cost-effective hierarchical ensemble pipeline with a meta-learner to amplify human action signals and learn causal relationships between models, achieving performance ready for real-world deployment

Research Intern at Flower Labs & CaMLSys, University of Cambridge

Oct 2022 – July 2023

Mentors: Nicholas Lane & Daniel Beutel

Cambridge, UK

- Developed the first privacy-preserving framework for federated XGBoost under horizontal federated learning setting that does not depend on the sharing of gradients and Hessians, which leads to serious privacy concerns
- Proposed a novel method to transform the tree ensembles built by local clients as inputs to neural networks to learn robust learning rate strategies
- Achieved performances comparable to state-of-the-art accuracies on benchmark classification and regression datasets including a9a, cod-rna, higgs, etc.

Research Assistant at Owens Lab, University of Michigan

July 2021 – Sept 2022

Mentors: Anderw Owens & Wenzhen Yuan

Ann Arbor, US

- Established Touch and Go — a human-collected visual-tactile dataset with 4000 different real-world objects, 14 hours of videos, and 13,900 touches which enables researchers to study diverse visual-tactile learning applications beyond the robotics-centric domains. Applied our dataset on multimodal learning tasks as follows
- Learned tactile features through self-supervised learning by training a model to associate images with touch. Experiments demonstrated that learned features significantly outperform supervised ImageNet features on a robotic manipulation task, and on recognizing materials in our dataset
- Proposed and applied our dataset on novel task of tactile-driven image stylization (i.e., making the visual appearance of an object more consistent with a given tactile signal)
- Studied multimodal models for future touch prediction by predicting future frames of a touch sensor's recording given both visual and tactile signals. Experiments showed that visual information improves these predictions over touch alone

Independent Researcher at University of Michigan

Jan 2021 – Feb 2022

- Conducted research on semantic segmentation for remote sensing images by alleviating large intra-class variance in both foreground and background classes
- Constructed a sparse and complete latent structure via prototypes to tackle the above issues by designing a prototypical contrastive learning strategy and modeling all foreground and hardest background objects
- Designed a novel patch shuffle augmentation to encourage the semantic information of an object to be correlated only to the limited context within the patch that is specific to its category
- Outperformed state-of-the-art methods by evaluating model on iSAID dataset

Research Intern at Revvity Inc.

Feb 2021 – July 2021

- Researched and developed a real time patient monitoring and alert system for patients who are at risk of being diagnosed with VTE using Spotfire developed by TIBCO Software Inc.
- Extracted keywords from patients Electronic Health Records using transformer-based models to score patients by Padua, Wells, Geneva, and PESI criteria
- System was tested in Shanghai Sixth People's Hospital. Successfully spotted and saved an average of 30% of patients per month

ACADEMIC SERVICES

-
- **Reviewer:** CVPR (2023 - 2025), NeurIPS Track on Datasets and Benchmarks (2022)
 - **Teaching Assistant:** Machine Learning (2023), Deep Learning in Healthcare (2024)

HONORS & AWARDS

-
- **Summa Cum Laude**, College of Engineering, University of Michigan 2022
 - **James B. Angell Scholar**, College of Engineering, University of Michigan 2021
 - **Dean's List**, College of Engineering, University of Michigan 2019-2022
 - **University Honors**, University of Michigan 2019-2022
 - **Engineering Honors Program Alumni**, College of Engineering, University of Michigan
